

The University of Texas – Rio Grande Valley

Syllabus for Math 3341.97L: Differential Equations Fall 2020

Online Asynchronous

Contact information

Instructor: Dr. Eleftherios Gkioulekas, School of Mathematical and Statistical Sciences

E-mail: eleftherios.gkioulekas@utrgv.edu

Web: <http://faculty.utrgv.edu/eleftherios.gkioulekas/>

Office hours: MW 16:00-17:00

Office location: EMAGC 3.214

Course information

Prerequisites: MATH 2414 (or MATH 2488) with a grade of 'C' or better.

Corequisites: None.

Course Description: This course emphasizes solution techniques. Topics include differential equations, vector spaces, linear transformation, matrix/vector algebra, eigenvectors, Laplace Transform and systems of equations.

Course modality: This course will be delivered fully online. There will be no designated class meeting time for real-time instructor/student interaction, which gives you the flexibility to engage with the course materials as best fits your daily schedule. Your learning will be guided by the digital presentation of the course content (e.g., recorded lectures, presentations, outlines, notes) and scheduled assignments. Your instructors will provide you with feedback on assigned work, communicate with you electronically, and be available to meet as defined on this syllabus.

Textbook

- (1) E. Gkioulekas (2014): "Lecture Notes on Ordinary Differential Equations", Edinburg, University of Texas Pan American (2014), 259 pp.
 - Open Educational Resource
 - This document can be downloaded as a pdf file, at no cost, from <https://faculty.utrgv.edu/eleftherios.gkioulekas/Teaching/notes.html>

Outline of Topics

Week 1

- **Introduction to Ordinary Differential Equations**

- **First-order ODES**

Separable ODEs

Homogeneous ODEs

Week 2

Integrating Factors method

- **Linear Algebra Review**

- Week 3

- **Linear Differential Equations**

Basic definitions

Function operators and linear operators

Homogeneous linear differential equations: The null space

Homogeneous linear differential equations: The initial value problem

Homogeneous linear differential equations: The Wronskian and its properties

Exam 1

Week 4

Solving homogeneous differential equations: Constant coefficient case

Solving homogeneous differential equations: Equidimensional case

Week 5

Solving inhomogeneous linear differential equations

Week 6

• **Series solution of ODEs**

The Gamma function

Review of power series

Week 7

Series solution of 2nd-order linear ODEs: Regular linear ODEs

Week 8

Series solution of 2nd-order linear ODEs: Regular singular linear ODEs (Frobenius method)

Week 9

Theory of Bessel functions

Exam 2• **Generalized Functions**

Introduction–Motivation

Schwarz definition of generalized functions

The Dirac delta function

Week 10

Operations with distributions

Derivative of distributions

Algebra with delta functions

Week 11

The Heaviside distribution

Distributional derivative of piecewise discontinuous functions

Side-limit evaluation of generalized functions

Distributions and Green's functions

Week 12

• **Laplace transforms**

Definition of Laplace transform

Laplace transforms of elementary functions

Week 13

Operational properties of Laplace transforms

Evaluating Laplace transforms

Laplace transform of piecewise defined functions

Laplace transforms of functions defined as a series

Exam 3

Week 14

Fundamental properties of Laplace transforms

Laplace transforms of functions defined as integrals

Application to differential equations

Week 15

ODEs forced with generalized functions

Systems of linear ODEs

Laplace transform of a convolution

Final Exam

Pedagogical objectives and expectations

The fundamental pedagogical objectives that students should strive for in every Mathematics course are:

- (1) To understand, learn, and remember the formal and rigorous mathematical *definition* for every concept covered in the course.
- (2) To understand, learn, and remember all the *theorems* and *propositions* that are applicable to previously defined concepts.
- (3) To understand, learn, and practice the *methods* for applying theorems in the solution of routine problems, and to be able to creatively synthesize techniques to solve problems that are non-routine and may require creative thinking.
- (4) To master *rigorous mathematical writing*, understand and use *logic and quantifier notation*, and realize and appreciate that every mathematical argument, from basic arithmetic, to advanced mathematics, with almost no exceptions, is a mathematical proof.
- (5) To master the course material to a level of excellence that will ensure sustained success in more advanced mathematics courses.

To be successful in this course, it is expected that you should:

- (1) Spend about 12 hours each week working homework problems, reviewing lecture notes, reading the textbook and online lecture notes, studying for exams, and seeking help from the tutors and instructor;
- (2) Complete all homework problems, check the correctness of your work, and understand the methods and principles they illustrate;
- (3) Master the designed course topics before each test, and if necessary, complete additional problems beyond those assigned and consult other sources if you find the assigned problems and text are insufficient;
- (4) Recognize that mastery of the solution to a problem is not demonstrated by simply obtaining the correct numerical answer, but only by a clear, systematic, and detailed solution that traces the given information to the final numerical answer and that employs knowledge developed in this and previous courses;
- (5) When you experience difficulty in the course, seek help from the tutors and instructor immediately;
- (6) Attend class meetings regularly, pay attention, and do not hesitate to ask questions; and
- (7) Write your solutions to homework, test, and quiz problems in an organized and legible way.

Grading Policies

- **Grading:** There will be 3 major exams, and a comprehensive final exam. The time and location of exams will be announced in class. Exams count for 75% and final exam for 25% of your grade. Combined, you get a numerical grade on a scale 0-20. Each exam question is graded on a 0-4 scale with 4 = A, 3 = B, 2 = C, 1 = D, 0 = F. Combining all exams, as explained above, gives a weighted average score on a 0-20 scale. This score is then mapped to a letter grade as follows: A: 16-20; B: 12-16; C: 10-12; D: 7-10; F: 0-7. There will be no curve and no extra credit.
- **Explanation of grades:** Your exams are graded question by question on a 0-4 scale per question. Overall, if you are planning to take future Mathematics or STEM courses, I would like to see you score 3 or 4 on all questions on all major examinations. If you score less than that on any questions, it indicates weaknesses in understanding the material. You should be proactive about addressing these weaknesses.

- **Missed exams:** If a major exam is missed during an excused absence, your score for that exam will be replaced with your final exam score.
- **Homework:** Homework will be assigned, but will not be collected or graded. Nevertheless, it is crucial to do the homework as part of your preparation for the exams. To keep up, I recommend that **after every lecture you should solve the homework problems corresponding to the material covered on that day's lecture. Thus you need to work on a continuous basis!** Maintain a well-organized written record of your homework solutions by **writing the statement of each problem** (so that your document is stand-alone and can be read by itself), followed by your detailed solution, and clearly indicate the problem, section, and chapter number of the question. Most homework problems require more than simply writing the answer, and so you must write all steps of your solution and provide appropriate justification, as illustrated by the instructor's solved examples, as you would on a test. Write neatly and legibly, using rigorous mathematical notation. While you are encouraged to discuss homework problems with other students, tutors, your instructor, and other faculty, the write-up of your solutions must be your own work and not simply copied from another student or another source. Use a ring binder to collect your homework, and write with a black pen, as that will help you to later scan the ring binder as a PDF file, for possible future use, and as a form of backup. This will provide you with a readily available resource to prepare for tests and quizzes, as well as providing documentation of the homework problems should you have a question about a problem and seek help from the instructor or a tutor.
- **Make-ups:** There are no make-up exams. In the case of **excused** absences the final exam will be used as a make-up exam. **Each student MUST take the final exam at the scheduled date and time.** There will be no make-ups for the final exam, after the official final exam date!
- **Regrading policy:** If you believe that a mistake in grading has been made you may request that your paper be regraded. Such request must be submitted **in writing** within one week from the day the graded test has been returned in class, and must be accompanied by the original (unaltered) paper. If you make any changes to the paper your request will be denied. Please note that if you request regrading, all problems are subject to review. Thus, your overall grade may be increased or decreased.

Attendance Policy for Online Asynchronous course

- **Attendance Policy:** Due to the asynchronous online modality of the course, attendance will be assessed with your participation in the discussion forums where you are expected to upload and discuss your solutions to the weekly homework assignments. The instructor has the prerogative to drop any student with four (4) or more unexcused absences, with each absence corresponding to failing to submit a homework assignment. The submitted homework should reflect a sincere effort to solve as many of the assigned homework problems as possible. **If you miss any major exam, you will be dropped from the course.**
- **How to Excuse an Absence:** To excuse an absence, you must notify the instructor **in writing** and attach **documentation**, before the date you will be absent, or no more than **three (3)** business days after the date. UTRGV's attendance policy excuses students from attending class if they are participating in officially sponsored university activities, such as athletics; for observance of religious holy days; or for military service.

Technical Requirements

- **Computer Hardware:** To participate in this online course, you should have easy access to a computer less than 5-years old with high-speed internet connection via cable modem, LAN or DSL. It is strongly recommended that you also have a printer (to print lecture notes) and scanner (to scan homework and take-home exams).

- **Student Technical Skills:** You are expected to be proficient with installing and using basic computer applications and have the ability to send and receive email attachments.
- **Software:**
 - Mozilla’s Firefox or Google Chrome
 - Adobe Acrobat
 - Zoom
 - Media player software (e.g. Quicktime, Windows Media Player, etc.)
 - Virus protection Software
 - Microsoft Word or TeXLive
- **Blackboard Support Contact Information:** If you need Blackboard support at any time during the course or to report a problem with Blackboard you can:
 - Visit the Blackboard Student Help Site: <https://help.blackboard.com/Learn/Student>
 - Submit a Blackboard Help Ticket: <http://utrgv.edu/coltthelp>
 - Need Blackboard assistance after hours? You can call our main office numbers, 956-882-6792 or 956-665-5327, to speak with a support representative.

Document Scanning

- Take home exams and homework assignments should be submitted as ONE PDF file per submission. Name your file: **Lastname-Firstname.pdf** using your First and Last name.
- **DO NOT JUST TAKE PHOTOGRAPHS OF YOUR PAPERS WITH A PHONE!!!! DON’T SEND ME IMAGE FILES!!! I need a PDF document that can be printed, and just taking pictures will not work.**
- **WRITE WITH A DARK PEN. DO NOT USE A PENCIL, ESPECIALLY A LIGHT ONE.** Your document may be barely readable on screen but not print well.
- **I won’t be able to grade an exam that looks unreadable on paper.**
- To scan with a printer/scanner, please use the following settings:
 - 400 dpi (less than 300dpi will not look good)
 - Black and White
 - Scan as PDF file
 The printer/scanner will then create a pdf file.
- To scan with a phone **YOU MUST USE A SCANNING APP.** For Android phones, I recommend Mobile Doc Scan. For iPhones, you can try CamScanner. In both apps, you take a photograph of the paper and then adjust the bounding box to the four corners of your paper. Image processing algorithms then produce an image that looks as if you fed the document through a real scanner. You need to do this for each page, so this is less convenient than an actual scanner. The apps can be used to generate a PDF file, which you can then transfer to a computer and submit by email.

Covid-19 related UTRGV policies

- Please visit the UTRGV COVID-19 Website via the following link for the most up-to-date information and resources (<https://www.utrgv.edu/coronavirus/index.htm>). This includes information on self-screening questions, links to forms for travel and contact, etc.
- **Face Covering Protocol:** As part of the university’s ongoing COVID-19 mitigation efforts to maintain a healthy environment for all members of our campus community, anyone entering a campus building must wear a face covering that covers the mouth and nose. The covering must be worn in all hallways, public spaces, research labs, teaching/computer labs, libraries, classrooms, automobiles with a passenger, stairwells, elevators and common areas, as well as office spaces. In office spaces, when social distancing of 6 feet is possible and maintained, face coverings may

be removed. Face coverings also are required in outdoor settings when safe social distancing and gathering practices are not possible.

Other Policies

- **Calendar of Activities:** Information regarding important dates, such as, first day of classes, holidays, last day to drop a class before it appears on the transcript (the census date), last day to drop or withdraw with a DR grade, and final exam schedule are available via the academic calendar, linked from the course website. Please be advised of these important dates, and feel free to inquire with the instructor about any questions you may have with regard to the academic calendar.
- **Calculators:** The problems you will encounter in my exams will not require a calculator, and you are better served in the long-term by minimizing your dependence on calculators. Don't use the calculator to approximate roots, exponentials, logarithms, etc. Mathematical problems require **exact** answers. Approximations are reasonable **only** on application problems where the numbers given may be approximate themselves, and thus the best answer that can be deduced is unavoidably approximate.
- **Classroom Conduct:** Common courtesy requires that students arrive in class on time, and stay the entire class period. Turn your cellphones and pagers off. You are required to treat your classmate and instructor with respect and courtesy. Use of any electronic devices, except for calculators, is not allowed in class, and I reserve the option to remove you from the classroom without warning for any behaviour that I deem as disrespectful or disruptive. You agree to indemnify and hold harmless the professor with respect to all actions undertaken by the professor to enforce classroom conduct or to properly proctor exams. Taking my course implies your consent to this policy.
- **Revisions:** This syllabus may be revised at any time. The syllabus posted on the professor's course web site is the only copy guaranteed to incorporate all revisions that may be made under this policy and will thus supersede any other versions posted on other university websites.
- **Mandatory Course Evaluations:** Students are required to complete an ONLINE evaluation of this course, accessed through your UTRGV account (<http://my.utrgv.edu>); you will be contacted through email with further instructions. Students who complete their evaluations will have priority access to their grades.
- **Students with disabilities:** Students with a documented disability (physical, psychological, learning, or other disability which affects academic performance) who would like to receive academic accommodations should contact Student Accessibility Services (SAS) as soon as possible to schedule an appointment to initiate services. Accommodations can be arranged through SAS at any time, but are not retroactive. Students who experience a broken bone, severe injury, or undergo surgery during the semester are eligible for temporary services.
 - *Pregnancy, Pregnancy-related, and Parenting Accommodations:* Title IX of the Education Amendments of 1972 prohibits sex discrimination, which includes discrimination based on pregnancy, marital status, or parental status. Students seeking accommodations related to pregnancy, pregnancy-related condition, or parenting (reasonably immediate postpartum period) are encouraged to contact Student Accessibility Services for additional information and to request accommodations.
 - *Student Accessibility Services – Brownsville Campus:* Student Accessibility Services is located in 1.107 in the Music and Learning Center building (BMSLC) and can be contacted by phone at (956) 882-7374 or via email at ability@utrgv.edu.

- *Student Accessibility Services – Edinburg Campus*: Student Accessibility Services is located in 108 University Center (EUCTR) and can be contacted by phone at (956) 665-7005 or via email at ability@utrgv.edu.
- **Scholastic dishonesty**: As members of a community dedicated to Honesty, Integrity and Respect, students are reminded that those who engage in scholastic dishonesty are subject to disciplinary penalties, including the possibility of failure in the course and expulsion from the University. Scholastic dishonesty includes but is not limited to: cheating, plagiarism (including self-plagiarism), and collusion; submission for credit of any work or materials that are attributable in whole or in part to another person; taking an examination for another person; any act designed to give unfair advantage to a student; or the attempt to commit such acts. Since scholastic dishonesty harms the individual, all students and the integrity of the University, policies on scholastic dishonesty will be strictly enforced (Board of Regents Rules and Regulations and UTRGV Academic Integrity Guidelines). All scholastic dishonesty incidents will be reported to Student Rights and Responsibilities.
- **Sexual misconduct and mandatory reporting**: In accordance with UT System regulations, your instructor is a “Responsible Employee” for reporting purposes under Title IX regulations and so must report to the Office of Institutional Equity & Diversity (oi@utrgv.edu) any instance, occurring during a student’s time in college, of sexual misconduct, which includes sexual assault, stalking, dating violence, domestic violence, and sexual harassment, about which she/he becomes aware during this course through writing, discussion, or personal disclosure. More information can be found at www.utrgv.edu/equity, including confidential resources available on campus. The faculty and staff of UTRGV actively strive to provide a learning, working, and living environment that promotes personal integrity, civility, and mutual respect that is free from sexual misconduct, discrimination, and all forms of violence. If students, faculty, or staff would like confidential assistance, or have questions, they can contact OVAVP (Office for Victim Advocacy & Violence Prevention) at 665-8287, 882-8282, or OVAVP@utrgv.edu.

Student Learning Outcomes

After completing this course students will be able to

- (1) Solve separable and homogeneous ordinary differential equations, as well as differential equations solvable with the integration factors method.
- (2) Understand the general theory of linear differential equations of order greater than one, linear independence, and results related to the Wronskian.
- (3) Solve certain types (constant coefficients and equidimensional) of linear differential equations of order greater than one.
- (4) Solve second-order linear differential equations using series techniques around points that are regular or regular-singular, and apply these methods to the theory of Bessel functions.
- (5) Understand the concept of generalized functions, the Dirac delta function, the Heaviside function, distributional derivatives of non-differentiable functions.
- (6) Use Laplace transforms to solve various types of ordinary differential equations, including ordinary differential equations forced by generalized functions.
