

CSCI 3327 Advanced VB
Lab Assignment # 8 PART B
Dr. Abraham
Due in one week.

This is a pretty long assignment, so I split it into two. The first half is due next week and the second half is due the following week as regularly scheduled. Instructional objectives of this assignment are:

Files and Streams
String Builder class
Arrays of Struct
Error Handling
Collections
LINQ
Sorting and Binary Search

Part A

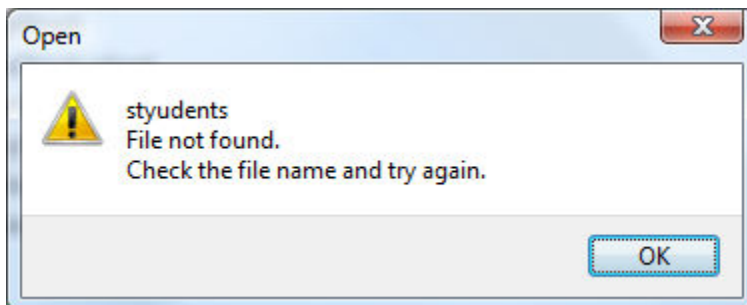

Create a form with four tabs, name the tabs appropriately, add Menu Strips to handle files and whatever else you want to do, add records for several students and save them to a file.

Here are some screen shots:

You get this screen the Open File (or Save File) Menu is clicked. Make sure this file name appears in the main form along with any messages. Add exception handling in this sub routine. Also please enable and disables buttons as necessary.

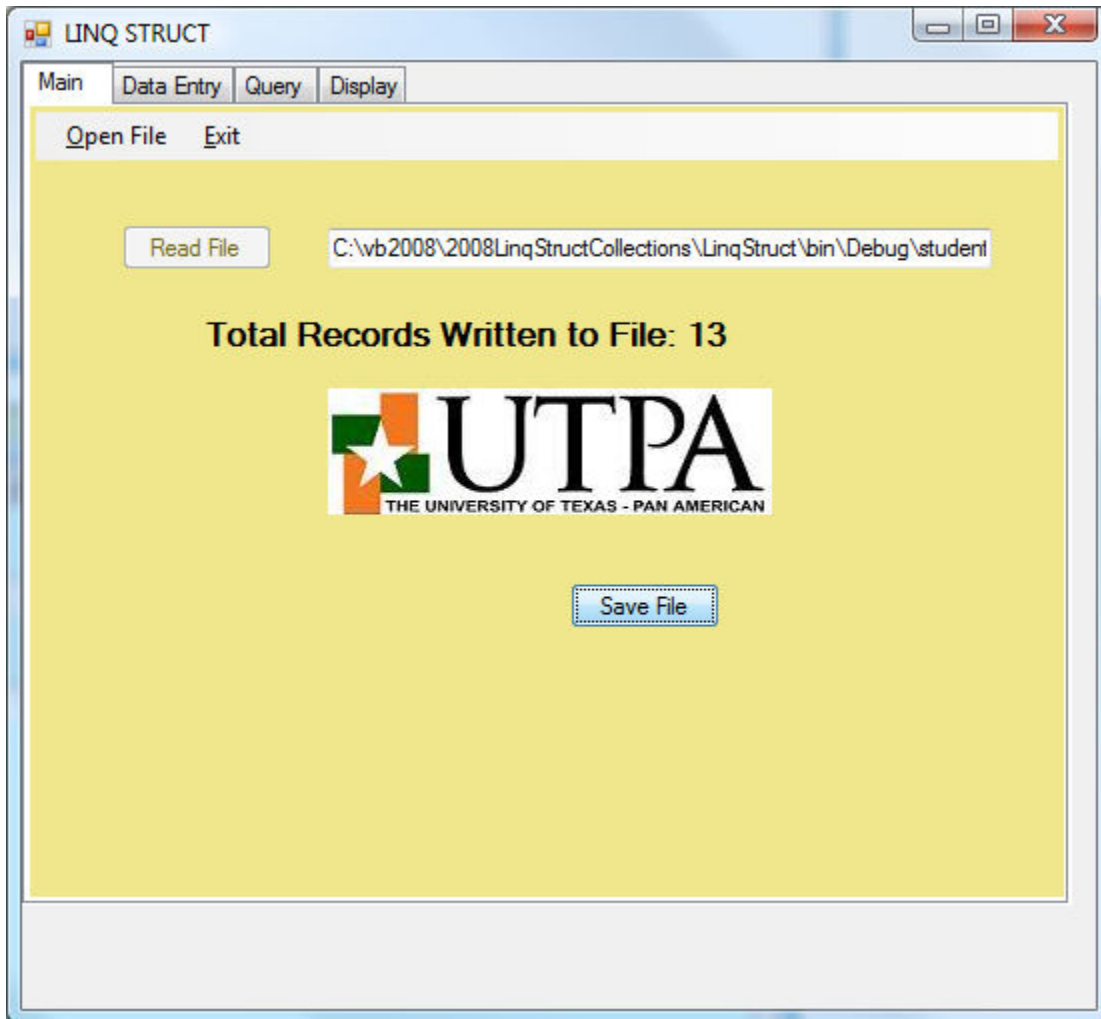

The screenshot shows a Windows application window titled "LINQ STRUCT". The window has four tabs: "Main", "Data Entry", "Query", and "Display". The "Data Entry" tab is selected. The form contains the following fields and controls:

Gamez	Ricardo
Student First Name	Last Name
956-381-3578	3.8
Telephone Number	GPA

Below the form, there is a text box containing "13" and a button labeled "Add to List". The text "Number of Items in List" is positioned below the text box.

Each record is added to an array of struct. I used a generic collection called list instead of creating my own array. The list handles automatically re-dimensioning as the list grows or shrinks.

PART B BEGINS HERE:

This portion deals with the third tab, Query. When you press the "Display All" button, the following screen is displayed with the first student's information. Please attention to the fact that the previous button is disabled and a new button "Save Changes" is visible. The later button should only be visible when changes can be made and saved. Clicking the next button should show each record sequentially. When the last record is reached the next button should be disabled and the previous button should be enabled.

The screenshot shows a window titled "LINQ STRUCT" with a menu bar containing "Main", "Data Entry", "Query", and "Display". The "Display" menu is active. Below the menu bar, there are four buttons: "Display All", "Display Sorted", "Previous", and "Next". The main area contains a form with the following fields and controls:

John	Abraham	
Student First Name	Last Name	
956-381-3550	2.00	Save Changes
Telephone Number	GPA	
Search Last Name	Binary Search Tele	

To search for a last name enter the last name and press search Last Name. We use a LINQ query to find the name.

LINQ STRUCT

Main Data Entry Query Display

Display All Display Sorted Previous Next

Student First Name

Last Name

Telephone Number

GPA

Search Last Name Binary Search Tele

To do the binary search, the list is first sorted on telephone, and then a binary search is done.

LINQ STRUCT

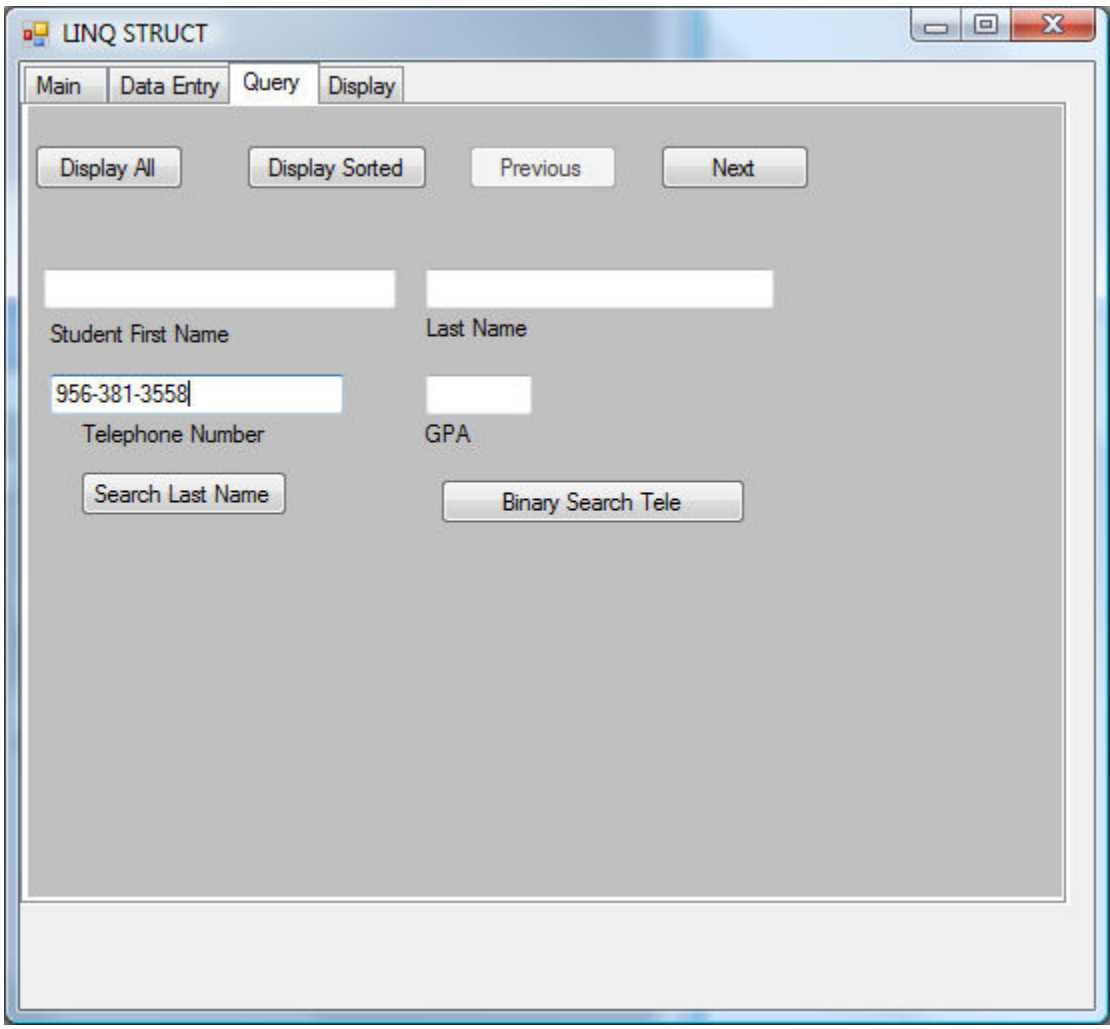

Main Data Entry Query Display

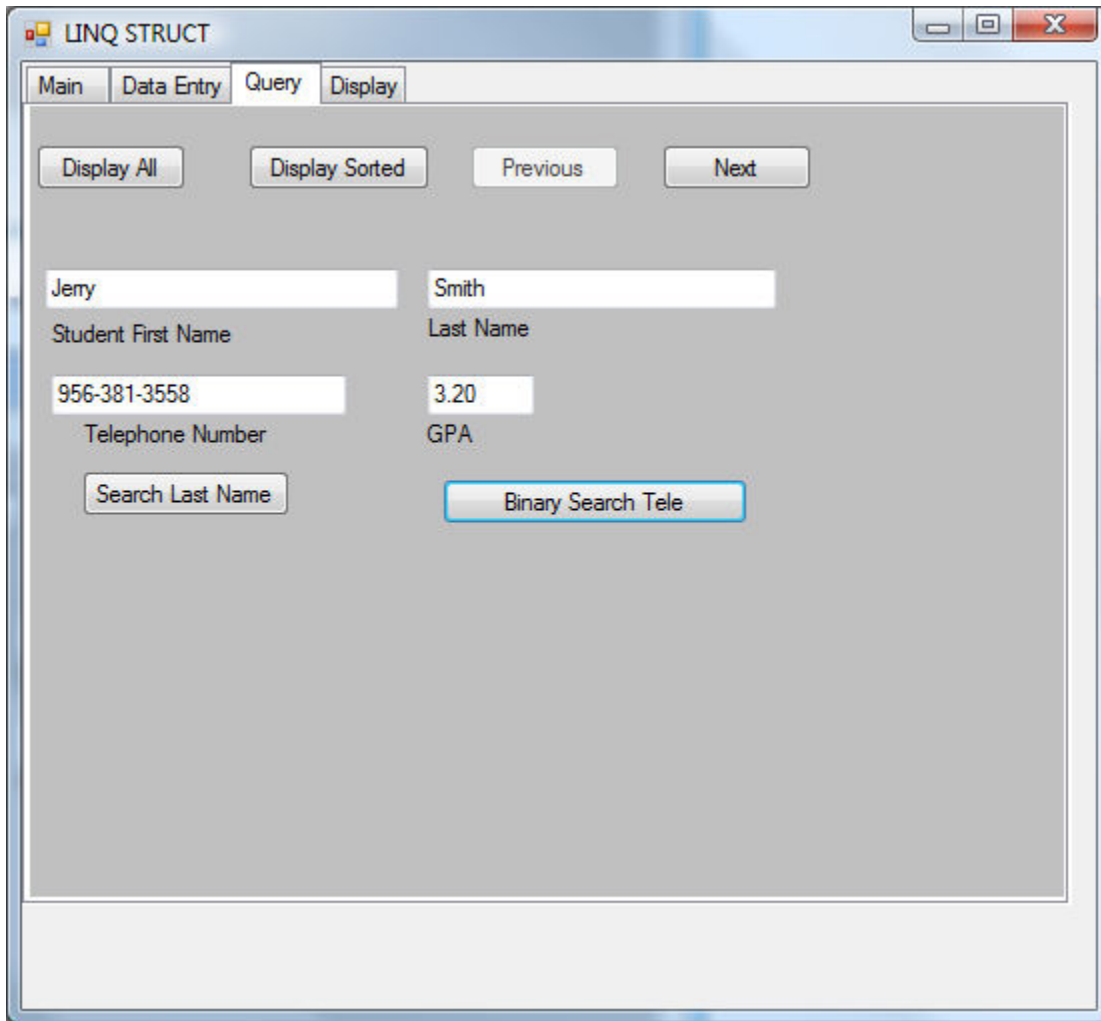

Display All Display Sorted Previous Next

Student First Name Last Name

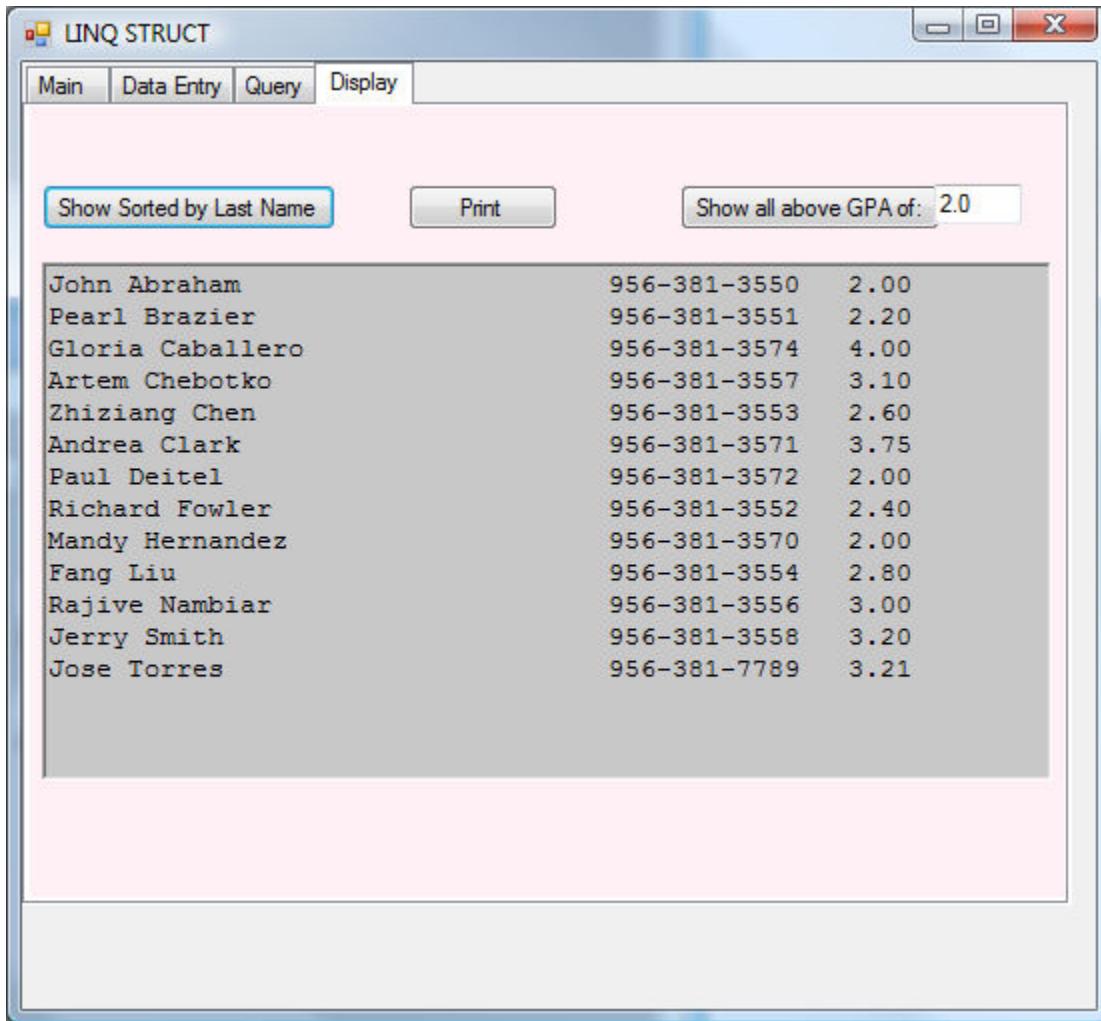

956-381-3558 Telephone Number GPA

Search Last Name Binary Search Tele

The last tab is to show the entire table. When “show sorted by last name” button is pressed, a sort is done based on last name and the list is displayed in tabular format using the StringBuilder class.

The last button is to show students above a certain GPA.

LINQ STRUCT

Main Data Entry Query Display

Show Sorted by Last Name Print Show all above GPA of: 2.0

Pearl Brazier	956-381-3551	2.20
Gloria Caballero	956-381-3574	4.00
Artem Chebotko	956-381-3557	3.10
Zhiziang Chen	956-381-3553	2.60
Andrea Clark	956-381-3571	3.75
Richard Fowler	956-381-3552	2.40
Fang Liu	956-381-3554	2.80
Rajive Nambiar	956-381-3556	3.00
Jerry Smith	956-381-3558	3.20
Jose Torres	956-381-7789	3.21
